Sort: The best new templates, if you've tried to create diagrams in PowerPoint, you may know how frustrating it is - we're sure to do it. To learn how to create herringbone diagrams in PowerPoint, follow the steps below, or for a more user-friendly and efficient solution, skip to the next section to learn about creating herringbone in Lucidchart 1. All the shapes you want can be found in the PowerPoint Shape Library, located on the Insert tab. Click Shapes to open the library. To insert a shape or line, select a shape or line from the drop-down library, and then click and drag your cursor to draw on your slide. 2. Draw head and spine Of your diagrams, the names for their shapes, which are similar to fish skeletons, and each element of the diagram is named after. The head of the herringbone diagram, which is the far-right rectangle. Contains the diagram global problem command. Select a rectangle from the Shapes library and add it to the right side of your slide. Once clicked on the rectangle and started typing to add text (for now you can type Problem as a placeholder), when you add a head, draw a horizontal line protruding from the left, which is the backbone of your diagram. 3. Add the cause and the next subcauses draw additional lines that extend from the center line at an angle. Each of these lines represents the cause that triggers your problem command. A herringbone diagram typically consists of six lines of these causes at the end of each line. One click on the rectangle and start typing to add text. Previously, just use a generic placeholder now. Add horizontal lines (two to three, depending on your needs) that extend from each cause line. These lines represent a subweb. At this point, the structure of your herringbone diagram is complete. If you want to leave blank to print or save as a template, save your PowerPoint as it is. 4.Label your diagram that you've finished the structure of your diagram, it's time to adapt to the problem you're fixing. On the Home tab, select Text Box. Click and drag to draw and resize the text box. Place these labels over each subtitle (tip: When you add one text box. 5. Format and format your diagram. If you're satisfied with the appearance of your diagram, you can use the To adjust the fill, opacity, or other style of the shape, double-click the fill color, which opens the Shape Formatting pane. Hold down Shift while you click a shape to select multiple shapes. Adjust the visual composition of your diagram until you are satisfied with the look of the diagram. When you're done, you're ready to save your complete herringbone diagram! Diagram!
